

QA REVIEW REPORT

Takween Tutors — Platform Requirements | QA Officer: Hafiz Saad | Developer: Haseeb Sajjad | Date: 11/08/2026

Review Summary

Overall Result	FAIL — not ready for sign-off
Review Date	11/08/2026
Project	Takween Tutors — Platform Requirements (Source: Platform Development Requirements v1.0)
Developer	Haseeb Sajjad
QA Reviewer	Hafiz Saad

Category	Status
Frontend Quick Wins	Pass
Parent Journey / Checkout	Fail
Student Journey	Pass
Tutor Journey	Fail
Admin	Partial
Confirmed Policies Cross-Check	Partial
Automated Emails	Partial

Notes to Developer

This round shows real progress — a lot has been fixed since the last pass. The booking system's server-side integrity (5.1) is now fully confirmed, closing out what the brief flagged as the root cause of prior cascading bugs. Admin can now see and action reschedule requests, resource/file uploads work correctly for both admin and tutors (and the Resources page is live), and the trial-confirmation, session-confirmation, and tutor-application-status emails are all confirmed arriving correctly. Tutor reassignment and the family-dashboard student-linking display are also confirmed working.

The result is still FAIL because three issues go beyond typical bugs. TT-24 breaks the purchase journey for brand-new customers directly after signup — arguably the single highest-value flow on the platform. TT-25 means tutors currently have no way to submit a progress report at all, so the feature Section 4.5 of the brief was specifically about doesn't yet exist in either its old or new form. TT-26 blocks job applications from reaching admin through the intended public form. Four further Fail-level items and one cosmetic UI note are detailed below.

Issues to Correct — Critical & Fail

TT-24 **CRITICAL** — Parent Journey / Checkout — Purchase Flow Breaks After Signup Mid-Checkout

Issue: A user without an account who tries to purchase a subject is correctly redirected to login/signup. After completing signup and logging back in to try again, they land on the dashboard instead of continuing the subject-purchase journey — the original purchase intent is lost and the user has to restart the flow manually.

Fix Required: Preserve the selected subject/purchase intent across the signup → login redirect so the user returns directly to checkout, pre-filled with their original selection, rather than to the dashboard.

QA Note: *This sits directly in the highest-value conversion path — a brand-new customer's first purchase attempt. Worth prioritising given the revenue impact.*

TT-25 **CRITICAL** — Tutor Journey — No Progress Report Writing Capability for Tutors

Issue: Tutors have no option anywhere in their dashboard to write or submit a session progress report (session date, student name, what was covered, performance, homework/next steps, concerns). The old number-based system was confirmed removed, so the platform currently has no progress-reporting capability in either direction.

Fix Required: Build the tutor-facing report submission form per the brief's field list, and confirm a submitted report correctly appears in both the student's "Recent Progress" and the parent's Family Dashboard, and triggers the associated email.

QA Note: *Logged as still open based on the last confirmed test. If tutor-side report writing has since been built and Recent Progress has been verified against a genuinely submitted report, please confirm so this can be closed out.*

TT-26 **CRITICAL** — Admin / Careers — Job Application Form Returns "Job Opening Not Found"

Issue: Submitting a job application through the public Careers page form returns a "Job opening not found" error — applications cannot be submitted through the intended channel. Admin's ability to update status and trigger emails for existing applications was separately confirmed working.

Fix Required: Fix the job-opening reference/lookup in the application form so submissions correctly associate with the relevant posting and reach the admin panel.

TT-27 **FAIL** — Parent Journey — Family Dashboard Session Time/Date Not Shown

Issue: The Family Dashboard shows each child's upcoming session, but the time and date are not clearly displayed.

Fix Required: Display session time and date clearly alongside each upcoming session entry in the Family Dashboard.

TT-28 **FAIL** — Parent Journey — Family Dashboard Billing History Missing

Issue: Family billing/payment history across all linked children is not shown in the Family Dashboard.

Fix Required: Surface payment/billing history for all linked children within the Family Dashboard, per the brief's requirement.

TT-29 **FAIL** — Automated Emails — Trial Follow-Up Payment-Link Email Not Received

Issue: The automated follow-up email sent after a trial session (encouraging subscription, containing the payment link) was not received by the parent. This is separate from the trial-confirmation email, which is now confirmed arriving correctly.

Fix Required: Confirm the trigger is wired for this specific email and test delivery end to end.

TT-30 **FAIL** — Automated Emails — 24-Hour Session Reminder Email Not Observed

Issue: The reminder email due to send 24 hours before a scheduled session was not observed/received.

Fix Required: Confirm the trigger and timing logic for this reminder and test delivery.

Issues to Correct — Partial & Minor

ID	Section	Issue	Required Correction
TT-31	Tutor Journey	Messages "send" button doesn't read as a send button — appears as a plain dot rather than a recognisable icon.	Restyle the send button so it's clearly identifiable. Not reported as functionally broken — purely visual.

Overall Impression

Strongest Area	Core booking/session data integrity (TT-5.1), reschedule visibility, resource uploads, and the trial-confirmation, session-confirmation, and tutor-application-status emails — all confirmed working following re-test this round.
Weakest Area	The new-customer purchase flow (TT-24) and the still-missing tutor progress-report capability (TT-25) — both touch core, revenue-relevant journeys rather than cosmetic detail.
Red Flags	TT-24 (breaks a live purchase attempt for brand-new customers) and TT-25 (a confirmed capability gap, not just a bug) are the two most launch-relevant items on this list.
Recommendation	Not ready for sign-off. Suggested order: (1) TT-24 and TT-25 first given revenue/feature impact, (2) TT-26 (job applications), (3) remaining Fail items (TT-27–TT-30), (4) TT-31 at Haseeb's discretion given it's cosmetic only.

Sign-Off

QA Officer	Hafiz Saad
Developer	Haseeb Sajjad
Date Resolved	<i>Pending</i>

Not ready for sign-off. To be revisited once TT-24, TT-25 and TT-26 are resolved at minimum, with the remaining Fail/Minor items addressed on a reasonable timeline.
